PROFILE

a Front-End Developer, Strong understanding of HTML5, CSS3, and JavaScript, as well as experience in using front-end frameworks such as React. Creative, detail-oriented and solution-oriented. Focuses on responsive design and understands UX principles to increase user engagement, Loves exploring new technologies and is committed to expanding knowledge in front-end development. Ready to contribute to creating engaging and effective user experiences. always learning all the time makes it easier for me to implement the latest technology for the next project.

EXPERIENCE

I include some of my experiences as a web developer, these experiences are projects that I created or worked on.

- create a website that is responsive on all devices and increase website loading speed on devices.

- create a gadget-themed online shop website, using the MongoDB database, working on all parts of this website starting from design, design, technology used, frontend and backend.

- always make sure the project runs well, write code that is clean and easy to maintain.

- develop websites using modern technologies such as React JS, and handle debugging, bug fixes, and improve site functionality regularly.

- Implement API and database integration to improve user interaction and data management.

- Transform UI/UX designs into responsive HTML, CSS, and JavaScript code, creating engaging and optimized user experiences. Focus on design-details to ensure consistency between mockup and final implementation.

- Transform design elements into dynamic layouts that comply with web development standards. Emphasizes accuracy and thoroughness in implementing designs into code, creating responsive layouts that comply with modern web development principles.

- Designed and implemented database structures for websites using MySQL and MongoDB.

- Integrate the database with the backend using Rest API and Fetch, ensuring the database is perfectly readable by users.
